

# Barracuda Web Application Firewall

## Powerful application-layer security for Web sites and Web servers

The Barracuda Web Application Firewall protects Web sites and Web applications from attackers leveraging protocol or application vulnerabilities to instigate data theft, denial of service, or defacement of an organization's Web site. Unlike traditional network firewalls or intrusion detection systems that simply pass HTTP, HTTPS, or FTP traffic for Web applications, the Barracuda Web Application Firewall proxies this traffic and inspects it for attacks to insulate Web servers from direct access by hackers.

### Comprehensive Web Site Protection

The Barracuda Web Application Firewall provides award-winning protection from all common attacks on Web applications, including SQL injections, cross-site scripting attacks, session tampering and buffer overflows. As a full proxy, the Barracuda Web Application Firewall blocks or cloaks attacks, while preventing sensitive outbound data leakage such as credit card or Social Security numbers.

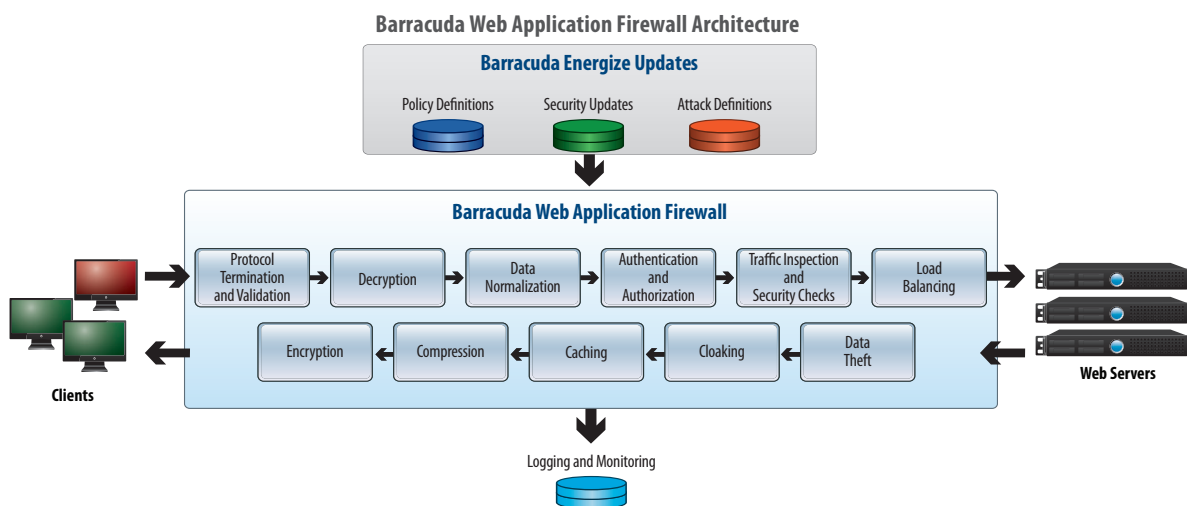

In addition, the Barracuda Web Application Firewall mitigates broken access control to applications by preventing cookie tampering and corruption of an application's access control system. Unlike intrusion detection systems that only analyze byte patterns, the Barracuda Web Application Firewall terminates HTTP traffic on behalf of the Web server to decode character sets, remove padded spacing, and normalize against common obfuscation techniques. For added security, the Barracuda Web Application Firewall provides full PKI integration for use with client certificates to verify identities of clients accessing the Web applications.

### Advanced Traffic Management and Acceleration

To minimize ongoing administration associated with protecting Web sites against application vulnerabilities, the Barracuda Web Application Firewall automatically receives Energize Updates with the latest policy, security and attack definitions. In addition to the comprehensive security benefits, there are also application delivery capabilities such as SSL offloading, SSL acceleration and load balancing. These capabilities are designed to improve the performance, scalability, and manageability of today's most demanding data center infrastructures.

The Barracuda Web Application Firewall monitors and tracks common application attacks, performance statistics and bandwidth usage.

## TECHNICAL SPECIFICATIONS

### Key Features

#### SUPPORTED WEB PROTOCOLS

- HTTP/S 0.9/1.0/1.1
- FTP/S
- XML
- IPv6 Ready

#### WEB APPLICATION SECURITY

- OWASP Top-Ten Protection
- Protection against common attacks
  - SQL Injection
  - OS command injection
  - Cross-site Scripting
  - Cookie or Forms Tampering
- Form field meta data validation
- Adaptive security
- Web site cloaking
- Response control
  - Block client
  - Reset connection
  - Redirect
  - Custom response

- Outbound data theft protection
  - Credit card numbers
  - Social Security numbers
  - Custom pattern matching (regex)
- Granular policies to HTML elements
- Protocol limit checks
- File upload control
- Brute force protection
- Session tracking

#### AUTHENTICATION AND AUTHORIZATION

- LDAP/RADIUS/local user database
- Client certificates
- Single Sign-On
- RSA SecurID<sup>2</sup>
- CA SiteMinder<sup>2</sup>

#### LOGGING, MONITORING AND REPORTING

- System log
- Web Firewall log
- Access log
- Audit log

#### SIEM Integrations

- ArcSight
- RSA ENVISION
- Splunk
- Symantec

#### APPLICATION DELIVERY AND ACCELERATION

- High availability
- SSL offloading
- Load balancing
- Content routing

#### XML FIREWALL

- XML DOS protection
- Schema / WSDL enforcement
- WS-I conformance checks

#### System Features

- Graphical user interface
- Role-based administration
- Secure remote administration
- Optional Ethernet bypass
- Trusted host exemption
- Vulnerability scanner integration

### Hardware Features

#### CONNECTORS

- WAN/LAN/MGMT ports
- Serial Port (DB-9) for console

#### HARDWARE SECURITY MODULE

- FIPS 140-2 HSM Model Available

#### POWER REQUIREMENTS

- AC Input Voltage - 110-240 V AC
- Frequency - 50 / 60 Hz

### Virtual Appliance Models

- VMware ESX/ESXi
- VMware Server/Fusion/Workstation/Player
- Citrix XenServer
- Microsoft Hyper-V
- Oracle VirtualBox

### Support Options

- Energize Updates Subscription
- Instant Replacement Service

MODEL COMPARISON	MODEL 360	MODEL 460	MODEL 660	MODEL 860	MODEL 960
<b>CAPACITY*</b>					
Backend Servers Supported	1-5	5-10	10-25	25-150	150-300
