SMART CONNECT

Simple, Secure WLAN Access for "Bring Your Own Device" Environments

As more and more business is done by people on the move, enterprises must be prepared to deliver wireless network access to a diversity of users and client devices, including employees and their guests. Meru Smart Connect solves the greatest barrier to secure connectivity options, greatly simplifying WLAN access in BYOD environments with one-click self-provisioning of client devices for secure 802.1x connectivity.

Product Overview

Smart Connect enables simple, policy-based control of personal and corporate devices by providing identity-based access, policy management and device registration for a diverse range of user- and corporate-owned mobile devices.

Smart Connect is a license option to the Identity Manager platform providing all of the functionality needed for administrators to quickly deploy and simply provision WLAN access for guests and their client devices.

IT Administrators

Smart Connect automates access and provisioning of Wi-Fi devices under centralized IT policies, decreasing the IT burden of guest access, provisioning and management. The one-click self-provisioning of client devices is simple enough that guests can be given access by non-IT personnel, including receptionists and administrative staff members.

Smart Connect also offers wizard-based setup for configuring network profiles, including:

- Integrated role-based authentication to map network profiles to users
- Integrated portal for end-user access without additional Web server requirements
- Ability to fully customize the portal and Smart Connect clients with consistent branding and messaging
- Integrated monitoring and reporting from a single location to quickly resolve problems

END-USER EXPERIENCE

Smart Connect gives users the power to easily connect to wireless and wired networks with any client device — while adhering to the strictest IT security requirements.

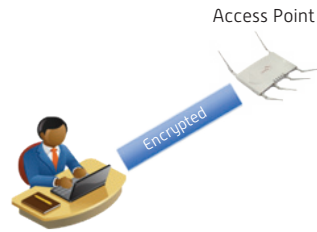

Users can self-provision their devices using the following steps:

1. Authenticate using Web authentication

2. One-click to configure 802.1x

3. Automatically connect with 802.1x

PRODUCT BENEFITS

Meru Smart Connect keeps you and your business moving by:

- Offering more IT control and compliance by setting the appropriate policy and configuration by user and client device
- Decreasing IT overhead for adding new client devices to the network
- Giving customers the option of self-service setup for quick network accessibility — without losing productivity
- Supporting multiple client devices and operating systems, including Windows, iOS, and Android
- Enabling you to support the majority of client devices right out-of-the-box

Platforms Supported

- Android 2.1 and greater
- Apple iOS (iPhone/iPad) 2.0 and greater
- Apple Mac OSX 10.7
- Windows 7
- Windows Vista
- Windows XP SP3

Protocols Supported

- 802.1x
- PEAP-GTC
- PEAP-MSCHAPv2
- WPA
- WPA-PSK
- WPA2
- WPA2-PSK

The Meru Difference: engineering wireless networks built for mobility from day one. As wireless devices increase in density and diversity, and move from casual to business-essential use, Meru helps customers across an array of industries prepare for the coming Wi-Fi flood.
